

Dear collaborator,

Since 1st of November 2013 we are developing the project European AstroTourism Route (EUSky Route) which is financed by the European Commission through the Enterprise and Industry Directorate-General.

The aim of this project is the implementation of a European Astro Tourism Route incorporating the existing knowledge in the fields of astronomy as well as tourism and leisure facilities. With this proposal we will develop an innovative product, diversify the tourism services and value our Astronomic Heritage.

Additionally, EUSky Route aims at consolidating the existing relations related to Astro Tourism, between the partners at a European level by combining astronomy, leisure and tourism.

This project is coordinated by SPET Turismo de Tenerife (Spain) working along with seven European partners: Podkarpacka Regionalna Organizacja Turystyczna (*Poland*), Agència Valenciana de Turismo (Dirección General de Turismo – Generalitat) (*Spain*), Istituto Nazionale Di Astrofisica (Inaf) (*Italy*), Tender Di Sdogiati Claudio Ong (*Italy*), Instituto De Desenvolvimento Social (Ids) Lisboa (*Portugal*), Personla Konsult Gantcho Popov - Gpopov (*Bulgaria*), Thessaloniki Science Center And Technology Museum (Noesis) (*Greece*)

In order to enable you to participate actively in the development of the project, you will receive detailed information on the project as well as future calls of workshops through this partnership.

We are profoundly convinced that the implementation of this European route will support the creation of an innovative product that will enrich the range of specialized tourism services and will improve the existing professional networks in Europe.

For further information, please do not hesitate to contact us via e-mail: euskyroute@webtenerife.com

Kind regards

Aida Cedrés Díaz
Head of touristic products creation and promotion
Turismo de Tenerife
Project Manager of the EUSky Route project
